Chapter 1

Introduction

1.1 About the Project

Place some introductory text here giving a brief description of the project.

1.2 License

How is the project licensed?

Chapter 2

How to Obtain

This collection is currently available on [location where project can be found](#).
[Any other ways of obtaining the project?](#)

2.1 Dependencies

[If known, give pointers to where the dependencies can be found.](#)

2.1.1 Ada Libraries

[For embedded application, it might be useful to know which Ada packages are used](#)

2.1.2 Other Libraries

[You may wish to list only external packages or all packages that are used.](#)

Chapter 3

Usage Instructions

This chapter contains the high level usage instructions for the project. If it is a library, what needs to be done to use it from another project. If it is an application, how to build and run the application.

3.0.1 How to Include in Your Project

If this project is a library, this will probably be just editing your .gpr file to point to this project's .gpr file. Something is definitely needed if it is more complicated. If the project is not a library, then this section can be omitted.

3.0.2 How to Build Program

If this project has an application, this may be as simple as `gprbuild project.gpr`, or it may be more complicated. Add comments if it is more complicated. If the project does not have an application, then this section can be omitted.

Chapter 4

API Description

If the project does not have a public API, this chapter can be omitted. Otherwise include an API description here. This would include packages, data types, routines to call, how to instantiate generics, and anything else that would be valuable to someone using the project.

Chapter 5

User Interface

If there is no user interface, this chapter can be omitted. Otherwise, if the project has a user interface, put instructions in this chapter.

Chapter 6

Other Stuff

If there is anything else that should be added, additional chapters may be added as needed.
